

Jorge Martins

jorgecunhamartins@gmail.com | +351 916062959 | [linkedin.com/in/jorgefcmartins](https://www.linkedin.com/in/jorgefcmartins)

Staff Site Reliability Engineer with 8+ years of experience architecting mission-critical cloud platforms and distributed systems. Expert in infrastructure automation, container orchestration, and observability for enterprise-grade healthcare and utility environments.

Proven track record of driving large-scale migrations and system optimizations, notably achieving a **30% reduction in cloud costs** through intelligent autoscaling and FinOps strategies. My focus is on delivering secure, scalable architecture that balances modern innovation with long-term operational stability.

Certifications

- **Certified Kubernetes Administrator (CKA)** – Linux Foundation
- **Certified Kubernetes Application Developer (CKAD)** – Linux Foundation
- **HashiCorp Certified: Terraform Associate**

Technical Skills

Cloud & Platform: AWS, GCP, Kubernetes (EKS/GKE), Docker, Karpenter

Provisioning IaC: Terraform, Terragrunt, Pulumi, CloudFormation, Helm, Ansible

CI/CD & Automation: GitHub Actions, Jenkins, Azure DevOps, Python, Bash

Observability: Datadog, Prometheus, Grafana, ELK/ECK, CloudWatch

Security & Networking: VPC Architecture, IAM, PrivateLink, WAF, Cert-Manager

Experience

Staff Site Reliability Engineer, Fabric Health (*former GYANT*) – Remote, Portugal January 2024 – Present
(Promoted from Senior Platform Engineer to lead architectural strategy and platform maturity)

- **Architectural Leadership:** Led a large-scope **VPC refactor** and **EKS Auto Mode** migration, delivering critical infrastructure changes across multiple systems with zero service disruption.
- **Cost Efficiency:** Achieved **\$50k/year in AWS compute savings** by implementing **Karpenter** for dynamic autoscaling and optimizing resource utilization.
- **Security & Compliance:** Hardened platform security via **private-only connectivity** for databases, **AWS WAF** integration, and automated **IAM permission** management.
- **Platform Tooling:** Defined the company-wide **provisioning architecture**, delivering a **unified provisioning repository** and **standardized Service Catalog** that align all infrastructure teams on shared IaC standards and streamline developer workflows.
- **Observability Transformation:** Standardized global monitoring by migrating the observability stack from Prometheus/ELK to **Datadog**, improving incident detection and logging.
- **Reliability Engineering:** Executed zero-downtime **Kubernetes cluster upgrades** and resolved long-standing platform gaps in **ACM certificate stability** and legacy load balancer usage.
- **Infrastructure Modernization:** Migrated from legacy Kubernetes Ingress to the **Gateway API** approach, decommissioning **Ingress NGINX** in favor of the **kgateway** controller to establish a more scalable and modern traffic management architecture.
- **Technical Mentorship:** Maintained platform stability by reviewing complex technical proposals and PRs across the organization to prevent architectural bottlenecks.

- **Unified Access Architecture:** Designed a hub-and-spoke access model with an identity-aware proxy that unifies engineering access across all of the company's acquired organizations, giving every engineer safe, auditable access to infrastructure without per-environment access sprawl.

Cloud Engineer (Freelancer), Tribusmed – Remote, Portugal

October 2023 – January 2024

- **Infrastructure as Code:** Architected and automated the provisioning of **GCP** resources using **Pulumi**, transitioning from manual configuration to a fully version-controlled infrastructure.
- **Event-Driven Autoscaling:** Configured **KEDA** to scale Kubernetes workloads dynamically based on **GCP Pub/Sub** metrics, optimizing resource consumption and message processing latency.
- **Workflow Optimization:** Designed and implemented streamlined **CI/CD pipelines** in **GitHub Actions** to support **ephemeral environments** for rapid feature testing.

Senior Platform Engineer, GYANT – Remote, Portugal

May 2022 – December 2023

- **Cloud Native Infrastructure:** Architected and maintained high-availability **Kubernetes** clusters utilizing custom **Helm** charts and secure ingress management via **NGINX** and **Cert-Manager**.
- **Observability Architecture:** Built and scaled a centralized logging and monitoring solution using **Elastic Cloud on Kubernetes (ECK)** and the ELK stack for high-volume healthcare data.
- **Security & Compliance:** Managed complex AWS environments via **Terraform** and implemented **Policy-as-Code** to ensure the platform met strict **HITRUST** healthcare compliance standards.
- **AI Platform Support:** Facilitated the deployment of self-hosted **AI Vector Databases** and large-scale data processing pipelines to support AI-driven healthcare features.
- **CI/CD Automation:** Streamlined deployment lifecycles by migrating legacy Travis CI pipelines to **GitHub Actions**, achieving a **50% reduction in build times** and improving developer productivity.

Site Reliability Engineer, Talkdesk – Remote, Portugal

January 2021 – April 2022

- **Infrastructure as Code & GitOps:** Orchestrated global AWS infrastructure using **Terraform** and **Terragrunt**, developing reusable modules and implementing **Atlantis** to enable a collaborative, PR-driven GitOps workflow.
- **Middleware & State Management:** Automated the lifecycle of critical data services—including **Kafka**, **Redis**, **RDS PostgreSQL**, **Elasticsearch**, and **MongoDB**—using **Ansible** to ensure high availability and consistent configuration.
- **Kubernetes & Containerization:** Managed large-scale **Kubernetes** clusters for containerized application deployments, maintaining optimized **Docker** images and integrating complex Git-based CI/CD workflows via **Jenkins**.
- **Security & Service Discovery:** Implemented and managed **HashiCorp Vault** for centralized secret orchestration and **Consul** for network configuration automation and service health monitoring across distributed systems.
- **Data Platform Operations:** Handled complex **Elasticsearch index migrations** with zero downtime and managed **Databricks** workspaces, including granular access control and permission management.

Technical Team Lead & DevOps Architect, Critical Software – Portugal

August 2019 – December 2020

- **Strategic Project Leadership:** Led a cross-functional team in the design and delivery of high-consequence **UK Energy Smart Metering** platforms. Managed the full technical roadmap using Agile/Kanban to drive infrastructure automation and backend feature development.
- **Architectural Stewardship:** Guided system architecture and technology selection for a high-concurrency data access solution. Collaborated with Product Owners to translate complex business logic and regulatory requirements into scalable technical implementations.
- **Multi-Cloud & IaC:** Engineered and administered complex environments across **multiple AWS accounts** and **Azure VMs**, utilizing **CloudFormation** to architect highly available systems (VPC, RDS, CloudFront, Lambda, API Gateway, and Route53).
- **Delivery & Reliability Engineering:** Automated production deployments and managed **Jenkins CI/CD** pipelines. Streamlined SQL database migrations, Git workflows, and dependency management via **Nexus Repository** for zero-friction delivery.

- **Security & Compliance:** Oversaw production data integrity and security measures, ensuring the platform adhered to strict **ISO 27001 compliance** and UK government utility standards.
- **Engineering Governance:** Mentored engineers, reviewed complex technical proposals, and coordinated with testing and client DevOps teams to ensure alignment with product quality standards.

DevOps Engineer, Critical Software – Portugal

April 2018 – August 2019

- **Infrastructure-as-Code (IaC):** Engineered automated environment provisioning across multiple AWS accounts using **CloudFormation**, integrating S3, CloudFront, Route53, Lambda, API Gateway, and Cognito to support a national-scale cloud platform.
- **Hybrid CI/CD Orchestration:** Developed and managed robust CI/CD pipelines utilizing **Jenkins and Azure**, streamlining code deployments and reducing operational overhead through the automation of Git workflows and shell scripting.
- **Backend & Data Engineering:** Built core backend modules in **Java (Maven)** and maintained NoSQL data models, ensuring the platform could scale to meet the demands of the UK Smart Metering infrastructure.
- **Quality Automation:** Designed and implemented comprehensive automated testing suites using **Robot Framework and Python**, significantly increasing software reliability and reducing manual regression testing time.

Software Engineer (Internship), Sentilant – Portugal

September 2017 – March 2018

- **Full-Stack Development:** Developed a vehicle telemetry system from the ground up, including a telemetry data acquisition device and a web server using **ASP.NET Core**.
- **Mobile & Data Engineering:** Created an **Android** application for trip management and designed/managed a **MySQL** database architecture to store and track real-time vehicle telemetry data.

Education

Bachelor's Degree in Computer Science | *Instituto Superior de Engenharia de Coimbra, Portugal*
ERASMUS+ International Exchange | *Universidad Rey Juan Carlos, Madrid, Spain*

March 2018
 February 2017
